Why Your Entire Team Needs LeanShift

Process optimization is not a solo project.
Real improvement happens when everyone works with the same
data, methods, and goals.

Fits into any system — no interface needed

LeanShift does not collect data on external servers. Everything stays local on the device.
Simply export results as a file and continue processing in any existing system.

ERP, SAP, BI tools, Google Sheets, Power BI — just import

One tool alone is not enough

When only one person measures and optimizes, improvements remain isolated. These three problems cost companies hundreds of thousands of euros every year.

Knowledge silos

Process knowledge is trapped in the heads of individual employees. When that person is absent, improvement stops. No one else knows the numbers, bottlenecks, or progress.

Inconsistent methods

Every department measures differently. Different spreadsheets, different definitions, no comparability. KPIs contradict each other, decisions are based on gut feeling instead of data.

No shared data baseline

The coach sees different numbers than the production manager. Meetings run on outdated data. Improvement potentials go unrecognized because the overview is missing.

This is what structured coaching looks like — the same for everyone:

Capture process steps

Start the timer, name the steps, record cycles.
Savings potential and process costs are calculated automatically.

All metrics at a glance

9 KPIs immediately after measurement. Time per step, process stability and coaching status included.

From current state to target — with numbers

14 KPIs calculate your target state. Savings potential in euros.

Investment calculator for budget approvals.

Make processes visible

Value stream analysis with flow diagram, timeline and
7-Muda marking — directly in the app.

Every role benefits

LeanShift gives everyone on the team the right tool — from the shop floor to the boardroom.

PRODUCTION MANAGER

Measure processes

Time measurement directly on the shop floor. Capture process steps, compare cycles, identify bottlenecks at a glance.

QUALITY MANAGER

Analyze waste

7-Muda analysis based on Toyota: Evaluate every process step, mark waste types, set priorities.

COACH / MANAGEMENT

Calculate ROI

14 KPIs in current/target comparison. Savings potential in euros. Investment calculator for budget approvals.

The Multiplier Effect

The more teams measure, the more savings potential becomes visible.

40.000+

EUR savings potential
per measurement

x5

Teams measure
in parallel

200.000+

EUR savings potential
per year

A single process measurement typically uncovers

40,000+ EUR in savings potential.

The license pays for itself in the **first working hour**.
